- Mobile systems for emergency deployment, mobile workplaces and accommodation units (containers, tents, etc)
- Pumps, valves for distribution of industrial water
- Electrical equipment (compressors, generator sets, middle voltage stations, iron radiators, boilers, heaters)

Delivery of technological lines and industrial products

Based on the technical specifications of our foreign Clients we can identify the qualified local manufacturers that meet best the project needs to design, develop, construct and test all parts and components of production plants, technological lines or special equipments required. We pass the Clients requirement to the selected manufacturers, give them necessary clarification and explanation and consult with them all commercial and technical aspects of

intended deliveries. We arrange with them for pricing of all parts /components and preliminary time schedule of complete project to guarantee to our Clients receiving full corporate offer reflecting all their requirements. Final assembly, trial operation, commissioning and handing over is done under supervision of our staff which assists the Client to communicate and solve all commercial aspects involved with the Main Supplier or Leading party of Consortium. We are particularly involved in technologies for:

- Food processing industry, agriculture plants, foodstuff industry
- Slaughter and meat processing plants
- Quick-freeze plants
- Brewery, filling lines, cannery
- Building material and building components for brick production
- Radio and TV transmitting technologies
- Water treatment and waste water treatment plants, mobile plants
- Welding and assembly lines

Advanced technologies are used for upgrading and retrofitting of existing plants, delivery of complete new systems and supply of spare parts. Our efforts are aimed minimizing investment and operation cost, increasing of production and reliability and reducing installation/maintenance time

Projects

We are specialized in design, execution and commissioning of some civil engineering works particularly in the territories of Middle East and North Africa as:

- Irrigation, pumping and water distribution units, industrial water, drainage systems
- Electrical installations
- Drilling of water wells

In co-operation with the Czech specialized companies we are capable to implement various turn - key projects according to recognized international standards that are tailored to individual requirements of our Clients.
